

Exercise

Hacking FHIR hands-on session

Track lead: Dan Benjamin (dbenjamin@asymmetrik.com)

Exercise Download:

The exercises are all performed inside a Virtual Machine containing an insecure FHIR server and a bunch of hacking tools.

Download the VM image here:

https://drive.google.com/open?id=1e1A36pZ_aiQfh2vdiiBkfRurXoCovkzL

Password: *fhir*

System Information: Ubuntu 16.04 LTS

Instructions:

1. Download VirtualBox: <https://www.virtualbox.org/>
2. Import appliance (FHIR-Hack.ova).
3. When prompted select *I copied it*.
4. Under *settings > networking* select an interface.
The exercises will work in NAT or Bridged mode.
5. On the desktop there are exercises and an Instruction Document.
Open the document and find the instructions.

Have fun!

Try out the exercises yourself, or come to our hands-on session where Dan will walk you through them.

There are a few hidden vulnerabilities. Let us know if you find them!

Organized **firely**
