

logica Sandbox

Building and Testing SMART on FHIR Apps with Logica Sandbox 2019

Nikolai Schwertner

CTIO of Interopion, Sr. Consultant to Logica Health & Intermountain Healthcare

Objectives

- Understand Logica Health mission
- Review Logica developer resources
- Gain experience in Logica sandbox platform*

* Assume basic familiarity with of FHIR, SMART on FHIR, CDS Hooks

Logica Members

- **Benefactors:** Intermountain Healthcare, Louisiana State University Health, Veteran's Administrations
- **Associates:** American College of Obstetricians & Gynecologists (ACOG), Allscripts, Ascension, Cerner, Cognitive Medical, JCS, OSEHRA, PCPI, UCSF, Wolters Kluwer

OUR MISSION

Improve health by creating a vibrant, open ecosystem of interoperable platforms, applications, and knowledge assets.

OUR VISION

Be a provider-led organization that accelerates the delivery of innovative healthcare applications that improve health and healthcare.

OUR GOALS

- Support **reliable sharing of a variety of knowledge content** to support clinical decisions and processes
- Provide a **Vendor Neutral Marketplace** for healthcare
- Create **standards based models and terminology** that support **semantic interoperability**
- **Support conformance and certification testing** to ensure true semantic interoperability

The Logica Developers Program

You build amazing health apps. We've got the tools to help.

HSPC | Developers

Logica Developers Portal

The resources needed to jump start any health app project: guides, tutorials, code samples, open source libraries, dev forums, etc.

Logica Sandbox

A personal instance of a SMART on FHIR platform in the cloud, complete with tools and sample data to help developers build and test health apps

Logica Gallery

Logica's Gallery shows off some of the best SMART on FHIR applications. Browse or even take them for a spin with our live demo feature.

Logica Sandbox Platform

Free FHIR Server

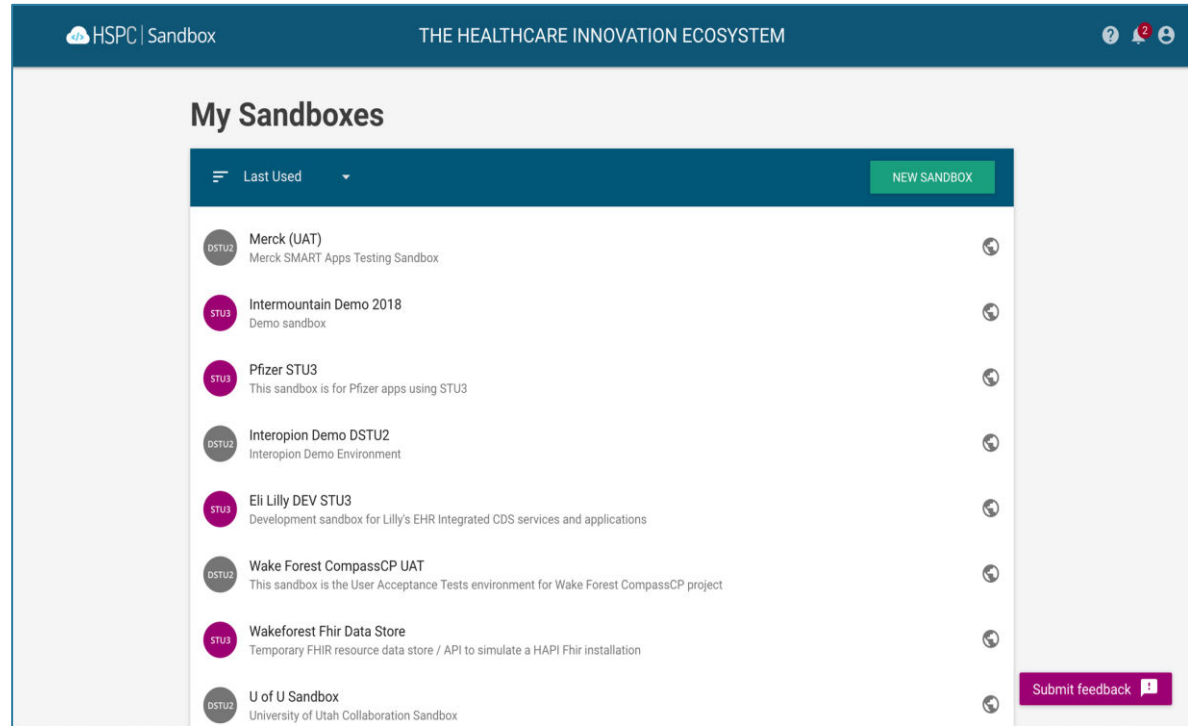

Sandboxes are available with personal DSTU2, STU3, and R4 FHIR Servers for development and testing that are free and on-demand.

Tools and Simulators

Build your app quickly and easily with our SMART Launch Tool and EHR Simulator. Add CDS Hooks with our CDS Hooks sandbox integration.

Teams and Collaborations

Invite others to join your sandbox to share your FHIR data and your app registrations.

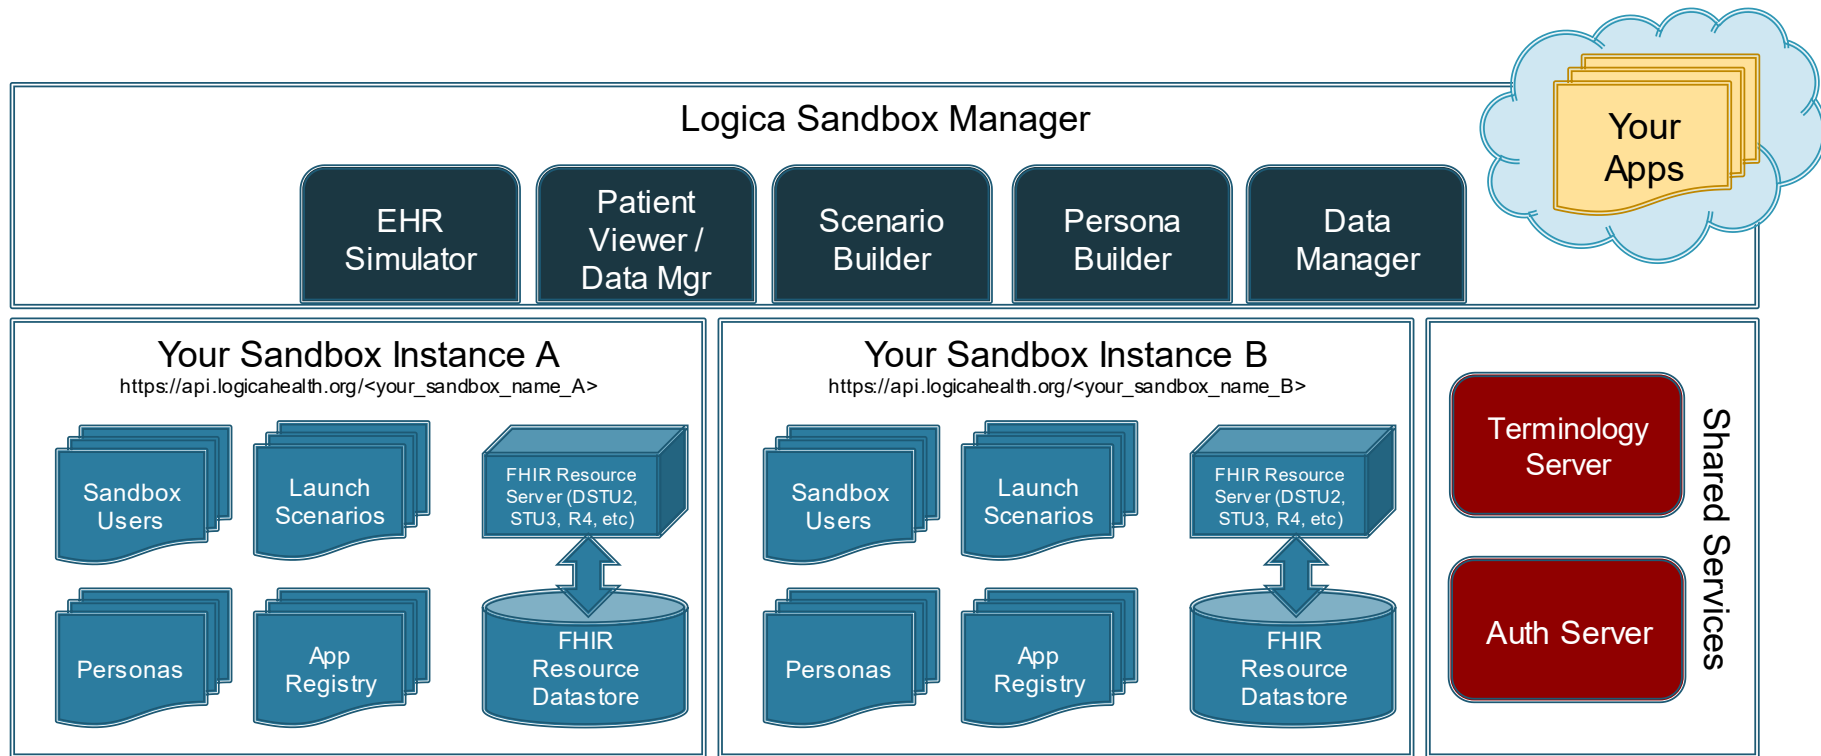

The screenshot displays the Logica Sandbox Platform interface. At the top, it shows 'HSPC | Sandbox' and 'THE HEALTHCARE INNOVATION ECOSYSTEM'. The main heading is 'My Sandboxes'. Below this, there is a dropdown menu for 'Last Used' and a 'NEW SANDBOX' button. A list of sandboxes is shown, each with a circular icon indicating its FHIR version (DSTU2 or STU3) and a brief description. The sandboxes listed are:

- Merck (UAT) - Merck SMART Apps Testing Sandbox (DSTU2)
- Intermountain Demo 2018 - Demo sandbox (STU3)
- Pfizer STU3 - This sandbox is for Pfizer apps using STU3 (STU3)
- Interopion Demo DSTU2 - Interopion Demo Environment (DSTU2)
- Eli Lilly DEV STU3 - Development sandbox for Lilly's EHR Integrated CDS services and applications (STU3)
- Wake Forest CompassCP UAT - This sandbox is the User Acceptance Tests environment for Wake Forest CompassCP project (DSTU2)
- Wakeforest Fhir Data Store - Temporary FHIR resource data store / API to simulate a HAPI Fhir installation (STU3)
- U of U Sandbox - University of Utah Collaboration Sandbox (DSTU2)

At the bottom right, there is a 'Submit feedback' button.

Platform Architecture

Sandbox

- Fully functional FHIR server, data manager, app launcher
- Vendor-neutral reference implementation environment
- Not appropriate for production use
- Support non-PHI data only (no HIPAA support)
- Limited support, no SLA

Concept definitions

- **Sandbox User** – actor who has account on the Logica platform and has access to sandbox environments
- **Persona** - fictional EHR user who launches an application (practitioner or patient)
- **Launch Scenario** – repeatable app launch context that encapsulates a persona, patient(s) context, and a specific app
