

# Are we making this too complicated?

- What do we yank?
  - Documents? Messaging? Storage? Subscriptions? CDS Hooks? Med Regulations? EBM? CarePlan? Half the IGs?
- What happens if we yank things?
  - They get built anyhow, just elsewhere (or many places), maybe less review
- What are the real problems with complexity?
  - Navigation & guidance – decision trees, filtering, views
  - Inconsistency of implementation – see above, + community
  - Sufficient review & implementation experience - ????
